

PS3® HD Component Cable

User Information

Congratulations on your purchase of Datel's *PS3® HD Component Cable*. Used in conjunction with a HD-capable television, you can now enjoy your PS3® as it is meant to be seen; in crisp and clear High Definition.

If your TV isn't HD-capable, you'll still benefit from the improved sharpness and color rendition of a component video cable at standard 480 resolution.

Connect the component cable to your PS3® and TV

Connect the special PS3 connector to your console.

The other end of the cable has five phono-type connectors; two carrying left and right audio, and three carrying the component YUV colors.

Plug the red, green and blue YUV leads to the *component-in* on your TV, and if required, the red and white audio leads to *audio-in* for the same input. Be careful not to mix up the red phono lead of the component video with the red phono lead of the audio connectors.

Choosing the right input

Set your TV to display the correct component input. Switch your PS3® on (if it isn't already) and you should be able to see the PS3®'s menu.

Note: Some TVs with more than one component input might only be able to accept an HD signal on one of the inputs. If you experience problems displaying a HD signal on a certain input, try an alternative input. Consult the manual that came with your TV for clarification.

Putting your PS3 in HD mode

Only follow this next section if your TV is capable of displaying a HD signal.

On the PS3®'s browser menu navigate to:

Settings > Display Settings > Video Input Settings

Select '*Component/D-Terminal*' (the screen flickers) and choose *OK* to keep the current settings. On the next screen you're asked to specify which resolutions are supported by your TV. Tick all the boxes that your TV can display. If you're unsure, highlight a resolution then press the *SQUARE* button to test whether your TV can display it. When you're done with your selection, press *RIGHT* and then choose *OK* to accept. Follow the remaining prompts to complete the setup.
