

HD Solution Pack

User Information

Congratulations on your purchase of Datel's *HD Solution Pack for Nintendo® Wii™*. Used in conjunction with a HD-capable television, you can now enjoy your Wii® games in crisp and clear 480p.

If your TV isn't HD-capable, you'll still benefit from the improved sharpness and color rendition of a component video cable at standard 480i resolution.

Connect the component cable to your Wii™ and TV

Connect the special Wii™ connector to your console.

The other end of the cable has five phono-type connectors; two carrying left and right audio, and three carrying the component YUV colors.

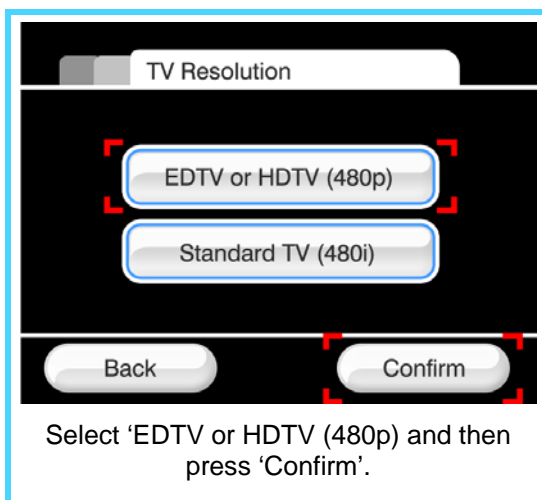

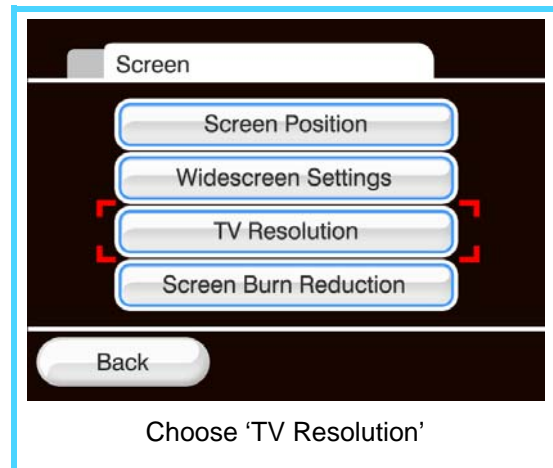

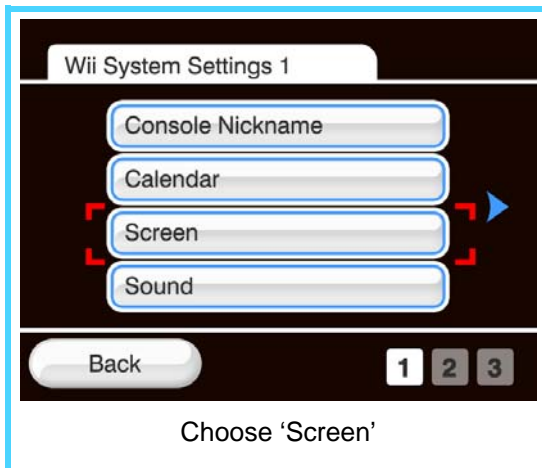

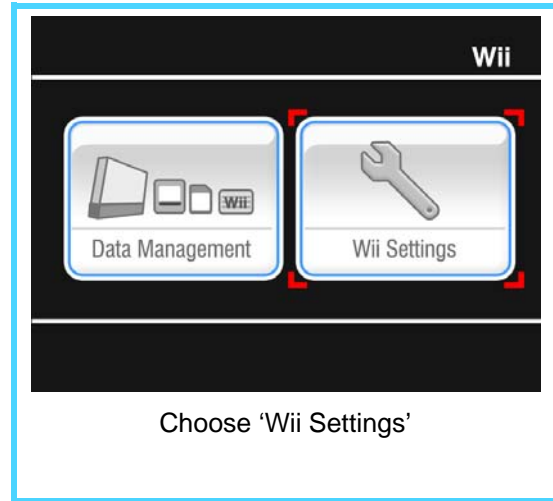

Plug the red, green and blue YUV leads to the *component-in* on your TV, and the red and white audio leads to *audio-in* for the same input. Be careful not to mix up the red phono lead of the component video with the red phono lead of the audio connectors.

Choosing the right input

Set your TV to display the correct component input. Switch your Wii™ on (if it isn't already) and you should be able to see the Wii™'s menu.

Putting your Wii™ in HD (480p) mode

Follow these simple instructions to put your Wii™ into 480p mode **only if your TV is capable of displaying a 480p signal**:
